

CRAFTED TOOLS MCP

Make your expertise available to AI.

A controlled way for AI assistants to work with your services, tools, information and established methods.

Your expertise can become available to AI.

Scoped engagements from \$2,500.

01 / THE OPPORTUNITY

A digital extension of your practice.

Make repeatable work accessible to AI assistants, with clear permissions and a defined route to human judgment when a request needs context or a decision.

An interface designed around your work

The Model Context Protocol (MCP) provides a structured way for AI assistants to access the capabilities and information you choose to make available.

For professional services and specialized businesses

A consultant, designer, researcher, advisor or small firm can expose established methods, tools and deliverables through a defined interface.

A useful point of engagement

Clients and their assistants can begin structured work, request approved information or prepare a brief. Decisions requiring practitioner judgment can return to a human with context prepared.

02 / CAPABILITIES

What an assistant could do.

The available tools are chosen for your service, systems and access requirements.

Consult your methods

Apply an established methodology or retrieve approved information.

Start or continue work

Submit a client brief, request analysis or a deliverable, use a specialized tool, or continue within an existing project.

Bring in people and agents

Prepare the information needed for a human decision, or coordinate specialized agents around a defined workflow with clear responsibilities and review points.

The scope defines which actions are automated, which require approval, and which belong to a human practitioner.

03 / WHAT WE BUILD

Defined access. Clear boundaries.

You decide what AI can see and what it can do.

Strategy and tool design

Define the value, users, capabilities and workflows the interface should support.

Authentication and permissions

Design authenticated access, client context and explicit information and action boundaries.

Connections and operating workflows

Connect approved apps, data and knowledge. Establish structured methods, human escalation and agent workflows where appropriate.

Testing, documentation and deployment

Validate the agreed tools and access rules. Document supported clients, deployment responsibilities and ongoing operation.

04 / STARTING PRICES

Choose a starting point.

Each engagement is scoped before work begins. Final price reflects integrations, permissions and deployment.

MCP Foundation

From \$2,500

A focused interface exposing a small number of clearly defined tools or capabilities.

Connected MCP

From \$5,000

Authenticated access, client-specific context, and connections to existing apps or data.

MCP Practice

From \$8,500

A digital extension of a professional practice, with established methods, agreed deliverables, and a clear handoff to a human expert when a request needs professional judgment.

Custom Agent System

From \$12,500

Multiple agents, MCP interfaces, internal systems and approval steps for more complex workflows.

Ongoing operation & development

From \$250/month, depending on hosting, monitoring, integrations, usage and continuing development. Third-party charges and usage costs are identified in the proposal.

Scoped services with a proposal before work begins.

CRAFTED TOOLS / NEXT STEPS

Bring your expertise into the conversation.

Crafted Tools Practice is the working example in development: structured methods and deliverables through the system, with practitioner involvement when human judgment is warranted.
